2d TQFTs and commutative Frobenius algebras

The relations of **2Cob**, written with `plumber`. Every equation is a chain of `\PL` layers; the last column shows what `reduce` makes of the left-hand side.

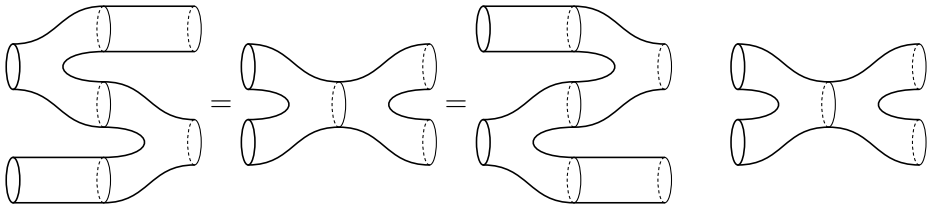

Associativity and unit

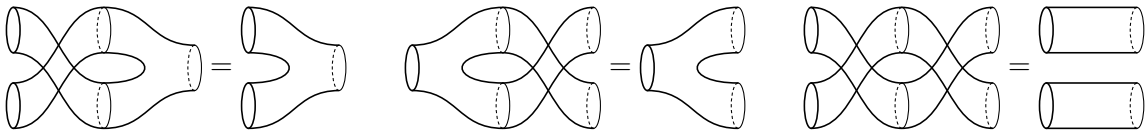

Coassociativity and counit

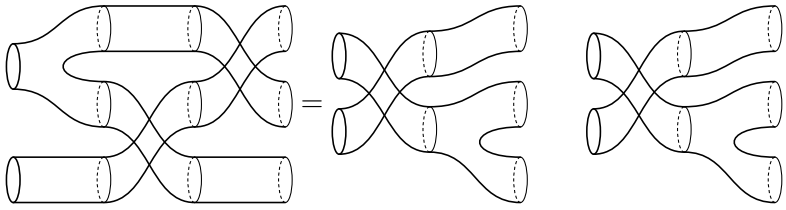

Frobenius relation

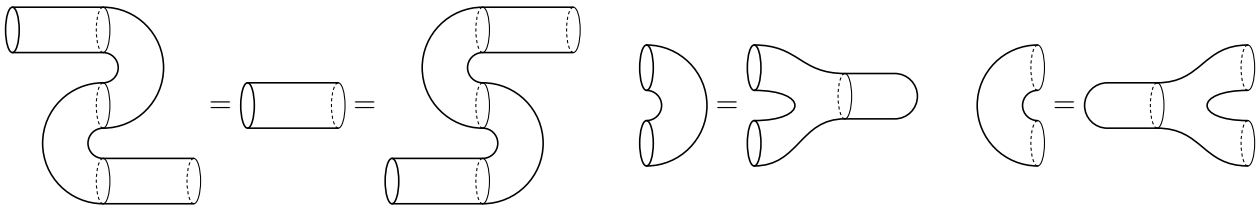

Commutativity and cocommutativity

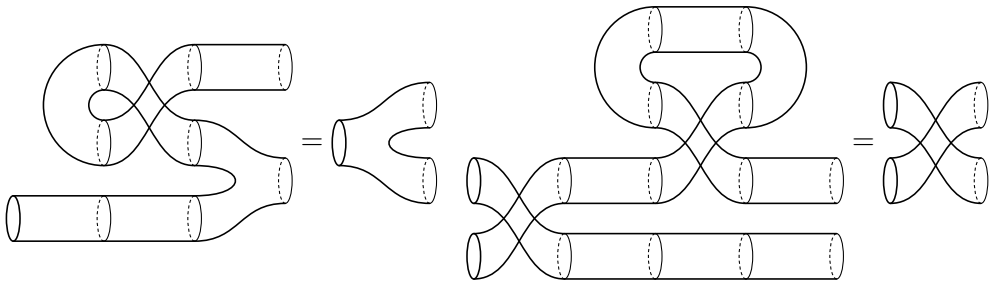

Naturality of the twist

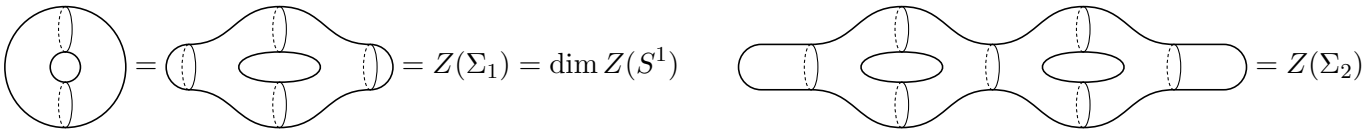

Duality: the snake (zig-zag) identities

Composites with crossings

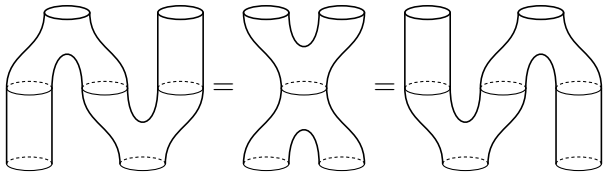

Closed surfaces

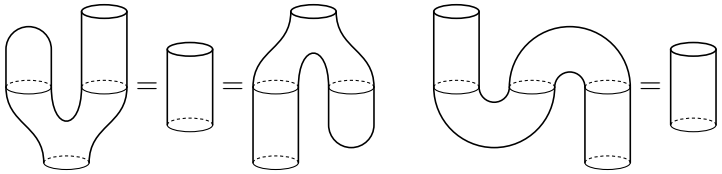

The same, read from top to bottom

Frobenius relation

Unit, counit and snake identities

A genus 2 surface with three inputs and two outputs, and its normal form
